PROSITAN PK Neutralising tanning agent

DESCRIPTION

Prositan PK is an anionic, neutralising tanning agent with high buffering and neutralising capacity. It can be used either alone or in combination with conventional neutralising agents, such as sodium bicarbonate and sodium formate, to neutralise all kinds of chrome leather.

TECHNICAL SPECIFICATIONS

Appearance	: White powder
Basis	: Organic and inorganic compounds
Concentration	: Approx 98%
pH	: 3 - 4
Packing	: 25 Kg bags

APPLICATIONS

Prositan PK has good resistance to light/heat yellowing, and the resultant light crust colour makes it ideal for white and pastel coloured leathers. Unlike conventional retanning materials, It does not bleach dyeings with anionic dyestuffs and is therefore particularly suitable as a neutralising tanning material in the retannage of aniline leathers which require full brilliant and level shades with excellent lightfastness.
